THEME & PROBLEM STATEMENT

1) AGRICULTURE

Farmers often face challenges such as lack of fair pricing for their produce and limited access to affordable farming equipment. Design a digital platform that enables transparent trade of crops and serves as an all-in-one pit stop for farmer needs, helping improve efficiency and sustainability in the agricultural ecosystem.

THEME & PROBLEM STATEMENT

2) Art and Culture

Traditional Indian folk artforms like Warli, Pithora, and Madhubani are slowly fading due to limited visibility and lack of modern platforms for promotion. Local artists struggle to reach wider audiences, and their cultural heritage risks being forgotten. Design a digital solution that preserves, promotes, and creates engagement around these traditional artforms - enabling artists to showcase their work, connect with audiences, and sustain their livelihoods in the digital age.

THEME & PROBLEM STATEMENT

3) Safety and Security

With cyber fraud cases rapidly increasing in India—from phishing emails and fake OTP calls to UPI scams and identity theft—different demographics such as students, professionals, homemakers, rural users, and senior citizens face unique risks and challenges. Your task is to design an innovative and adaptable platform that raises awareness, educates users, and empowers them to recognize, prevent, and respond to such threats. The solution should make cyber safety simple, relatable, and trustworthy, while remaining flexible enough to reach diverse groups.

Terms & Conditions

- You agree that the details provided in the registration form are true and complete to the best of your knowledge.
- The CodeFury 8.0 organizing committee is in no way responsible for any incorrect information provided by the participants.
- Any violation of the eligibility criteria mentioned on the website will lead to immediate disqualification of the team.
- **The Participants should choose any one theme among the three themes and build a website or an application.**
- The participants can use any IDE to design the Web/ iOS/ Android application.
- Participants found downloading entire templates will be disqualified. But participants are permitted to use the internet (for small blocks of code to implement a certain functionality to aid them in building the webpage/app).
- The participants will be given some functionalities or features to implemented at regular intervals via the WhatsApp group and Gmail. Extra points will be awarded to those teams implementing these features.

Terms & Conditions

- Pushing the code to a GitHub repository at regular intervals is compulsory for both web and app development as plagiarism will be judged based on that (It's advised to have meaningful commits).
- The last commit to the GitHub repository containing the source code of the application should be made by 5:59 PM, 23rd August 2025.
- All submissions that will be mentioned should be submitted via Google Form by 5:59 PM, 23rd August 2025.
- The final winners will be chosen based on their Final product.
- The final decision is based on the sole discretion of the panel of judges.
- The decision made by the panel of judges is final and will not be amended under any circumstances.
- The participants will have to heed the instructions given by the CodeFury 8.0 organizing committee and the CodeFury 8.0 volunteering committee.
- In case of any disputes, the decision of IEEE UVCE is final.

Submission

- The participants need to create a folder on their Google Drive which must contain the following and submit its public link via Google form.
- A document containing the team name along with the names and phone numbers of the participants and the link to their GitHub repository of the entire application.
- The document should also contain a brief description of their application, its functionality and the way it solves the given problem statement. (Around 150-200 words).
- Important note: Below the description, make sure to mention the prompts that you have implemented.
- App Development: An APK file of the application. (Not required in case of iOS application).
- Web Development: The participants are also requested to host their website on any platform (Eg: Heroku, Netlify, AWS, etc.) and the link to the website should also be mentioned in the document.
- A screen recording of the way the application functions. Make sure to include all the features in the video.
- The name of the Google Drive folder should be your team name.
